EURODEFIPADS®

MULTIFUNCTION PADS

High quality materials, continuous process control and extreme care in assessing the compatibility and the conformity to the international standards make EURODEFIPADS® excellent and safe devices. Easy to be used, they assure optimal clinical performances both in emergency and elective cases.

EURODEFIPADS® is a complete line of adult and pediatric disposable multifunction electrodes for defibrillation, synchronized cardioversion, external cardiac stimulation and ECG monitoring with different connectors compatible with the main defibrillators present in the market.

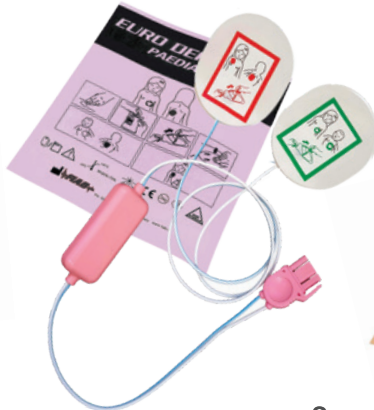

Radiotransparent models (with radiolucent cable and pads) have been designed for use in EP labs, haemodynamics and during radiographic and angiographic procedures. Lead-out preconnectable models (marked with suffix W) have cable and terminal connector outside the pouch, allowing to connect pads to the defibrillator before opening pouch; they have been intended especially for emergency situations.

Euro Defi Pads are compatible with monophasic and biphasic defibrillators (manual, semi-automatic and automatic) and they comply with **European Directive and International Standards** (IEC/EN 60601-1, IEC/EN 60601-2-4, ANSI/AAMI DF-80, EN ISO 10993-1)
