A Real MAGNAtude of M

The *Carpentier-Edwards PERIMOUNT Magna mitral pericardial* mitral repair. The Magna mitral valve is the ultimate in mitral

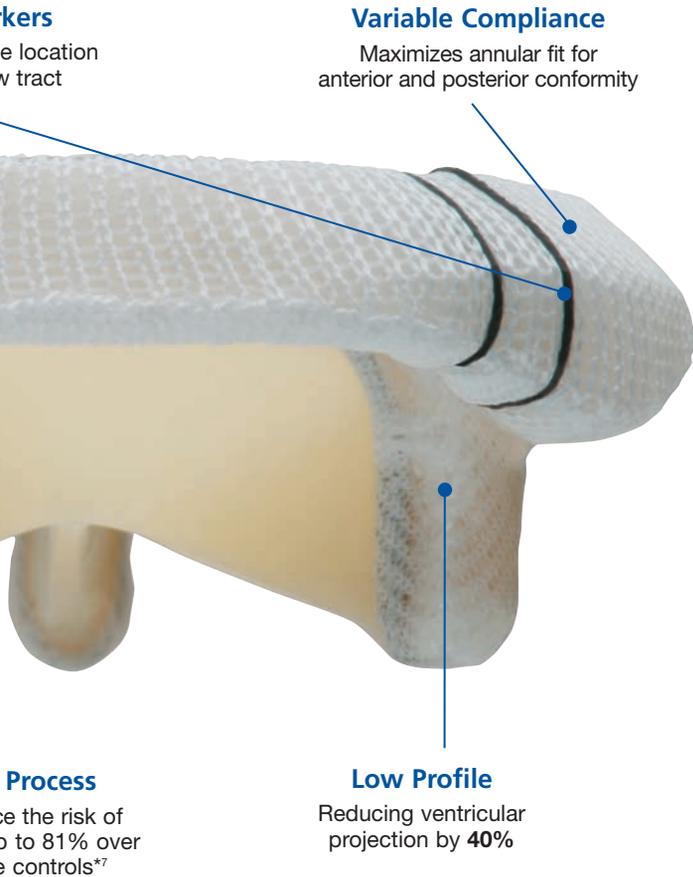

Real Mitral Performance

- In the mitral annulus, the fibrous anterior aspect is anatomically distinct from the muscular posterior aspect giving the annulus an overall saddle-shaped geometry.^{1,3}
 - The asymmetric design of the Magna mitral valve optimizes annular conformity while reference markers delineate the outflow tract for optimal hemodynamic positioning in the mitral annulus
- Mitral annular degenerative changes, such as calcification and scar tissue, can result in coaptive challenges between the sewing cuff and annular tissue⁶
 - The Magna mitral valve has a wide, expansive sewing cuff with variable compliance that enhances the coaptive interface between cuff and mitral annular tissue while accommodating variability in suture technique
- Left ventricular wall injury and outflow tract obstruction have been known to result from projection of the stent into the left ventricle⁶
 - The Magna mitral valve has the lowest effective profile of any mitral tissue valve, giving it the lowest ventricular projection for any stented mitral valve in the industry^{4,5}

MITRAL Performance.

Cardial bioprosthesis embodies over 40 years of Edwards innovation in mitral replacement and is designed to produce a real MAGNAtude of MITRAL performance.

Unique Mitral Design

- The only asymmetric mitral valve designed to enhance coaptive interface between anterior and posterior aspects of the native mitral annulus
- Lowest effective profile of any mitral tissue valve with reduced ventricular projection by 40%^{4,5}

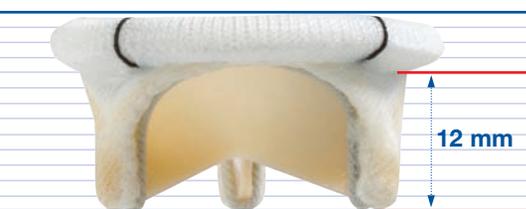

Unmatched Implantability

- Lowest ventricular projection for any stented mitral valve^{4,5}
- Wide, expansive sewing cuff with 25% more effective suture area
- Anatomic reference markers to optimize orientation for position and ventricular flow

Unparalleled Durability

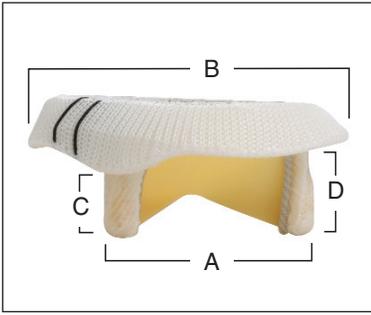

- Built upon the 16-year proven durability of the Carpentier-Edwards PERIMOUNT mitral valve²
- The Carpentier-Edwards ThermoFix process* is the only dual-action tissue treatment designed to confront the causes of calcific SVD

Low Profile

PERIMOUNT mitral valve
(25 mm)

Carpentier-Edwards PERIMOUNT MAGNA Mitral Pericardial Bioprosthesis

Model 7000TFX Nominal Specifications (mm)

Size	25 mm	27 mm	29 mm	31 mm	33 mm
A. External Stent Diameter (TAD)	28	29.5	31.5	33.5	33.5
B. External Sewing Ring Diameter	36	38	40	42	44
C. Anterior Effective Profile	7	7.5	8	8.5	8.5
D. Posterior Effective Profile	10	10.5	11	11.5	11.5

Accessories

1117	Flexible, reusable mitral handle
1111	Reusable handle
1126	Longer, single use handle
1177HP	Sizer set; includes EOA, size and LVOT markers
TRAY1177HP	Accessory tray

Lock in Confidence
The Tricentrix holder system aids in implantability and visualization for ease of valve insertion and suture tie down.

Accessory tray with easy to read EOA performance-based labeling.

Sizer lip mimics the sewing band for precise sizing with any technique.
